

It is required to test the goodness of fit of the distribution with probability density function f given by

The expected frequencies, correct to 4 decimal places, are given in the following table.

(a) Show that $a = 4.6007$ and find the value of b . [3]

9231/41/M/J/23

- (b) Carry out a goodness of fit test, at the 10% significance level, to test whether f is a satisfactory model for the data. [6]
