

- 7 (a) Starting from the definitions of cosh and sinh in terms of exponentials, prove that

$$2 \sinh^2 A = \cosh 2A - 1. \quad [3]$$

- (b) A curve has equation $y = x^2$, for $0 \leq x \leq \frac{2}{3}$. The area of the surface generated when the curve is rotated through 2π radians about the x -axis is denoted by S .

Use the substitution $x = \frac{1}{2} \sinh u$ to show that $S = \frac{1}{32} \pi \left(\frac{820}{81} - \ln 3 \right)$. [9]
